## S-Fold Style Curtains

With S-Fold in the Sampson Mills F16, FS16, & F120 Curtain Systems you:

- can have a smaller stack of 18% allowing you to keep your views.
- can have 30-100 feet of continuous one directional curtains.
- can have a traversing curtain at up to 10 lbs per foot.
- can enjoy a smooth operation even when spliced.

For Fabrics and materials under 5 mm  
thickness use our 2 strip solution for  
mounting your material.

\*Tracks can be suspended when connecting to PF120

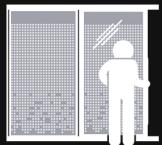

Standard  
Colors:

White   Anodized   Black

## Shuttle Design

The Shuttle is ideal for room dividing and window covering. Whether you're using this system for corporate, hospitality or residential, the system works for you. It even allows for window and sliding door covering as it takes up a minimal depth allowing it to fit in tight places. A 5 panel system only takes up a 3.5" depth.

With wide variety of materials from thin materials like a Shoji screen to thicker acoustic felt materials you can make the space your own by incorporating a system that serves a practical, technical, and design element to your space.

## Gemini Profile

Minimum Radius 10"  
Standard Radius 10"  
No Maximum Radius

A Vertical style system  
designed for permanent  
predetermined angles

Universal Stella Nova Resort  
Architect: HGX Design  
Product: Sampson Mills Gemini System

As you walk through a space your first impressions often depict how you experience everything after. The predetermined angles of the Gemini system are unique in that they allow you to permanently both **block out what you don't want seen** like a highway or dumpster and to permanently **bring in to view the sites you want seen** like the pool, the ocean, the mountains. giving you full control of the experience without anyone even realizing it. You control the emotional feel of the ambiance and, by locking in the angles, no one can accidentally change your view, insuring the optimal experience in your design.

Universal's Terra Luna Resort  
Architect: HGX Design  
Product: Sampson Mills Gemini System

*With the Gemini the power of what is seen and of what isn't seen is now under your full control, redefining customer experience.*

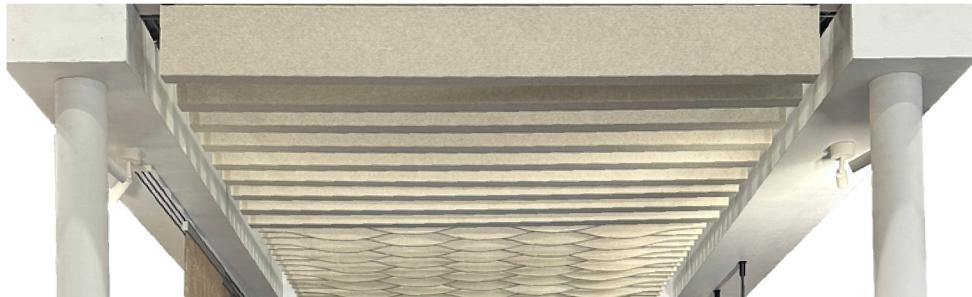

# Sampson Mills

## Gemini Baffle Profile

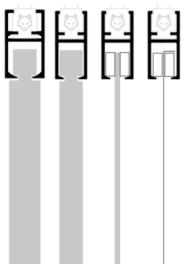

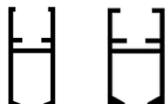

Minimum Radius 10"  
Standard Radius 10"  
No Maximum Radius

As a baffle you can make different shapes and sizes using different design and acoustic materials. Materials from metal to felt to fabric.

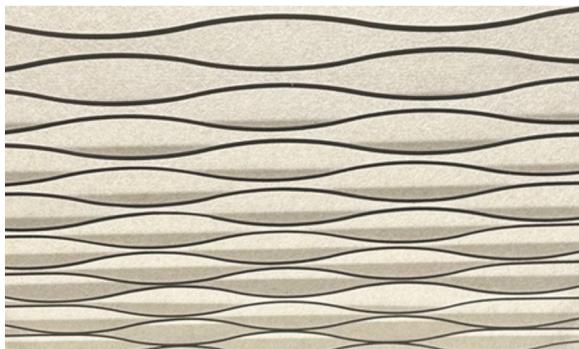

## Gemini Carrier

PFB90 PFB12  
Can work with a range of sizes. See brochure for details.

### The Gemini Baffle

Great for skylights, exposed ceilings, music studios or just to help with the acoustics in your open room.

## Custom Colors For All Sampson Mills Tracks

For custom color orders contact us to place your order!

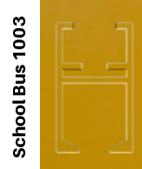

You can also prepare in advance and order your tracks pre-finished and we'll cut them to size when you're ready  
You can reserve up to 12 months before your order.

*We offer black, white, and silver as our standard color options but we understand in design there are ever-changing color schemes to match individual personalities of a space and the person calling the space home even if just for a quick stay.*

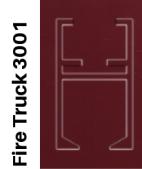

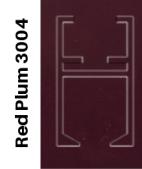

*With the Chameleon USA Powder coated Color options you can now order a track in a custom RAL Color for your project without any minimums.*

*An example of some fun pop colors we've used in past projects.*

*Let your imagination go wild*
